

Problem Statement

Startup Blueprint AI – Intelligent Startup Business Planning Agent

Problem Description

Many aspiring entrepreneurs have innovative startup ideas but lack the knowledge, resources, and guidance to transform those ideas into complete business plans. Preparing a business model, conducting market research, estimating budgets, analyzing competitors, identifying funding opportunities, and understanding legal requirements can be difficult for first-time founders.

To solve this challenge, an AI-powered Startup Blueprint Generator was developed that automatically creates a comprehensive business blueprint from a simple startup idea.

Proposed Solution

This project was **developed using IBM Business Automation Open Edition (IBM BOB)** as the development environment and integrates **IBM watsonx.ai Granite Foundation Models** to provide intelligent business planning assistance.

The AI agent accepts a startup idea from the user and generates a structured business blueprint containing:

- Executive Summary
- Startup Name & Tagline
- Problem & Solution Analysis
- Target Audience
- Business Model Canvas
- Revenue Model
- Market Opportunity (TAM, SAM, SOM)
- Competitor Analysis
- SWOT Analysis
- Budget Estimation
- Go-to-Market Strategy
- Marketing Plan
- Funding Suggestions

- Government Startup Schemes
- Legal Guidance
- Risk Analysis
- Growth Roadmap
- Investor Pitch Summary
- Business Readiness Score

The application also supports startup idea validation, session-based blueprint history, and PDF export for sharing with mentors, investors, and incubators.

Technologies Used

- **Development Environment:** IBM Business Automation Open Edition (IBM BOB)
- **Artificial Intelligence:** IBM watsonx.ai
- **Foundation Model:** IBM Granite 3.3 8B Instruct
- **Backend:** Python Flask
- **Frontend:** HTML5, CSS3, JavaScript, Bootstrap
- **PDF Generation:** FPDF2
- **Environment Variables:** python-dotenv
- **Version Control:** Git & GitHub

Expected Outcome

The Startup Blueprint AI Agent helps entrepreneurs quickly convert innovative ideas into actionable business plans, reducing the time and effort required for startup planning while leveraging IBM's AI technologies for intelligent recommendations.
